Project Overview: Waterproof Liner For Residential Concrete Planters Above Underground Car-park
Products Used: LINE-X XS-350; LINE-X XS-100, ASPART-X Clear Coat
Case Study Provided by: LINE-X Romania

With the LINE-X coating in place, rainwater stopped leaking through the concrete planters into the parking garage below. The final result was a completely watertight seal that will prevent future water ingress and subsequent leaks.

The LINE-X coating not only sealed the concrete, it also gave the planter increased durability and resistance to extreme weather conditions. LINE-X coatings are strong enough to withstand impact damage but remain flexible to expand and contract with the concrete as the temperature changes. This planter is ready to be admired for years to come.
